

PHYSICS

Chair: [David Baker](#)

Faculty: Andra Petrean, David Whelan

Visiting Faculty: Vince Gregoric

Emeriti: Larry Robinson, Donald Salisbury

The mission of the Physics Department at Austin College is to provide a positive, active learning environment for undergraduate students to explore physics and engineering. The department teaches a diverse group of students, including non-science majors, physics and engineering physics majors, physics minors, other science majors, and pre-professional students. Through course offerings, laboratory activities, and undergraduate research, the physics curriculum presents multiple opportunities for students to develop as scientists and engineers.

Degrees Offered in Physics

Major in Physics

Major in Engineering Physics

Minor in Physics

A **major in physics** consists of:

Required Core Courses (7 course credits)

_____ PHY 111 Physics for Scientists and Engineers I

_____ PHY 112 Physics for Scientists and Engineers II

_____ PHY 211 Vibration, Waves, and Optics

_____ PHY 212 Introduction to Modern Physics

_____ PHY 261 Research Experience (0.5 credit course)

_____ PHY 311 Classical Mechanics

_____ PHY 312 Electromagnetism

_____ PHY 361 Advanced Research Experience (0.5 credit course)

Elective courses 200 level or above (2 course credits)

_____ PHY 230 Electronics

_____ PHY 240 Atmospheric and Environmental Physics

____ PHY 250 Intermediate Topics in Physics
____ PHY 260 Intermediate Directed Study
____ PHY 281 Statics and Engineering Design
____ PHY 350 Advanced Topics in Physics
____ PHY 351 Advanced Laboratory
____ PHY 431 Quantum Mechanics
____ PHY 451 Observational Astronomy
____ PHY 460 Advanced Directed Study
____ PHY 464 Teaching/Learning Participation
____ PHY 490 Independent Study in Physics
____ PHY 492 Independent Study Off-Campus

Elective courses 300 level or higher (1 course credit)

____ PHY 350 Advanced Topics in Physics
____ PHY 351 Advanced Laboratory
____ PHY 431 Quantum Mechanics
____ PHY 451 Observational Astronomy
____ PHY 460 Advanced Directed Study
____ PHY 464 Teaching/Learning Participation
____ PHY 490 Independent Study in Physics
____ PHY 492 Independent Study Off-Campus

Other Considerations When Planning for the Major:

- Courses used as prerequisites for physics courses must be passed with grades of at least a C.
- Students planning to pursue the pre-engineering program should enroll in Physics 111 and Mathematics 151 in the fall term of their first year.
- Credit may not be received for both Physics 105 and 111, or both Physics 106 and 112.

Total Credits Requirement = 10 course credits

A major in engineering physics consists of:

Required Core Courses (7 course credits)

- _____ PHY 111 Physics for Scientists and Engineers I
- _____ PHY 112 Physics for Scientists and Engineers II
- _____ PHY 211 Vibration, Waves, and Optics
- _____ PHY 212 Introduction to Modern Physics
- _____ PHY 281 Statics and Engineering Design
- _____ PHY 311 Classical Mechanics
- _____ PHY 261 Research Experience (0.5 credit course)
- _____ PHY 361 Advanced Research Experience (0.5 credit course)

Engineering Physics Elective courses 200 level or above (1 course credit)

- _____ PHY 230 Electronics
- _____ PHY 240 Atmospheric and Environmental Physics
- _____ PHY 312 Electromagnetism
- _____ PHY 350 Advanced Topics in Physics
- _____ PHY 351 Advanced Laboratory
- _____ PHY 431 Quantum Mechanics
- _____ PHY 451 Observational Astronomy
- _____ PHY 490 Independent Study in Physics
- _____ CHEM 342 Thermodynamics and Kinetics

Elective courses 300 level or higher (2 course credits)

- _____ PHY 312 Electromagnetism

- _____ PHY 350 Advanced Topics in Physics
- _____ PHY 351 Advanced Laboratory
- _____ PHY 431 Quantum Mechanics
- _____ PHY 451 Observational Astronomy
- _____ PHY 490 Independent Study in Physics
- _____ PHY 492 Independent Study Off-Campus
- _____ CHEM 342 Thermodynamics and Kinetics

Supporting Courses

- _____ MATH 151 Calculus I
- _____ MATH 152 Calculus II
- _____ MATH 252 Calculus III
- _____ MATH 301 Ordinary Differential Equations
- _____ CS 111 Computer Science for Scientists
- _____ CHEM 111 General Chemistry I

Total Credits Requirement = 10 course credits

A **minor in physics** consists of:

Required Core Courses (5.5 course credits)

- _____ PHY 111 Physics for Scientists and Engineers I
- _____ PHY 112 Physics for Scientists and Engineers II
- _____ PHY 211 Vibration, Waves, and Optics
- _____ PHY 212 Introduction to Modern Physics
- _____ PHY 261 Research Experience (0.5 course credit)
- _____ PHY 311 Classical Mechanics

Total Credits Requirement = 5.5 course credits

COURSES

PHY 101 Explorations in Physics

Introductory courses intended for the general audience; these courses do not count as prerequisite for other courses in physics or satisfy requirements for the major in physics. These courses introduce students to the process and product of scientific inquiry, and to ways that knowledge of physics affects our lives. Title and emphasis announced in term schedule of courses. Past topics have included astronomy, weather, cosmology, and physics for teachers. These courses include a laboratory component. May be repeated when topic varies. Requirements met: Sciences Breadth. (Usually each fall and spring)

PHY 105 Physics for Health Sciences I (Algebra-Based)

First semester of an algebra-based two-semester introductory sequence in physics. Topics treated include mechanics, vibratory motion, and sound with emphasis on both conceptual foundations and problem-solving techniques. Includes one three-hour lab per week. PREQ: High school algebra or equivalent. Requirements met: Sciences Breadth and Quantitative Competency. (Each fall)

PHY 106 Physics for Health Sciences II (Algebra-Based)

Continues the study of physics begun in Physics 105. This algebra-based course explores conceptual foundations in electricity and magnetism, optics, and modern physics. Students will learn problem-solving techniques in these areas. Physics 106 is the appropriate second course for students who plan no further study in physics. Includes one three-hour lab per week. PREQ: Physics 105. Requirements met: Sciences Breadth and Quantitative Competency. (Each spring)

PHY 111 Physics for Scientists and Engineers I

First semester of a calculus-based two-semester introductory sequence in physics using the Workshop Physics method. This approach combines inquiry-based cooperative learning with comprehensive use of computer tools. Topics include kinematics, Newton's Laws of motion, energy, and rotational motion. The laboratory component is integrated into the normal class period. COREQ: Mathematics 151. Requirements met: Sciences Breadth and Quantitative Competency. Previous course title Physics I (Calculus-Based). (Each fall)

PHY 112 Physics for Scientists and Engineers II

Continues the study of physics begun in Physics 111 using the Workshop Physics method. This approach combines inquiry-based cooperative learning with comprehensive use of computer tools. Topics include electricity, electronics, magnetism, and thermodynamics. The laboratory component is integrated into the normal class period. Physics 112 is required for further study in physics. PREQ: Physics 111. COREQ: Mathematics 152. Requirements met: Sciences Breadth and Quantitative Competency. Previous course title Physics II (Calculus-Based). (Each spring)

PHY 131 Discovering the Cosmos

Astronomy is one of the oldest and most influential of the observational sciences. From its modern inception over four hundred years ago, we are continually discovering anew how varied,

complex, and mysterious is the Universe. This course will introduce a modern understanding of stars and galaxies, will address how observational evidence influences the ways in which humans view the night sky, and will incorporate new discoveries as they are published. Specific topics may include the nature of the stars, what lies between the stars, star birth and death, exoplanets, the Milky Way Galaxy and other galaxies, and modern cosmology. This course may not count toward a major or minor in physics. Requirements met: Non-Lab Science Breadth. (Every year either fall or spring)

PHY 136 Explorations in Physics for Teachers

This introductory course is designed for students in the Austin Teacher Program. It explores the process and product of scientific inquiry, and how that knowledge affects our lives. Specific topics may include mechanics, light, sound, electricity, magnetism, and modern physics. Inquiry-based learning approaches are emphasized, and a laboratory component is required. This course does not count as a prerequisite for other courses in physics or satisfy requirements for the major or minor in physics. Requirements met: Science Breadth. (Each spring)

PHY 211 Vibrations, Waves, and Optics

The course begins with a study of simple harmonic motion, and proceeds through damped, driven oscillations and resonance. The course introduces mechanical waves and wave phenomena such as standing waves, interference, and diffraction of waves. Electromagnetic waves and their properties, including reflection, refraction, and polarization, are studied, as are interference and diffraction of light waves. Includes one three-hour lab per week. PREQ: Physics 112 and Mathematics 152. COREQ: Mathematics 252. (Each fall)

PHY 212 Introduction to Modern Physics

An introduction to modern physics topics, including special relativity, introductory quantum mechanics, atomic physics, solid state physics, nuclear physics, and elementary particles. Includes one three-hour lab per week. PREQ: Physics 211 and Mathematics 252. COREQ: Mathematics 301. (Each spring)

PHY 230 Electronics

This course examines the physics of electronic devices, introduces circuit analysis techniques, and provides practice in the design and use of basic circuits. This course emphasizes analog electronics, but elementary digital techniques also are explored. Includes one three-hour lab per week. PREQ: Physics 112 and Mathematics 152. (Spring of even-numbered years)

PHY 240 Atmospheric and Environmental Physics

This course offers a project-oriented approach to the study of atmospheric structure, atmospheric dynamics, thermodynamics, radiation, atmospheric instrumentation and observations, energy, climate, and severe weather. It serves as an approved science course for the environmental studies major. Includes one three-hour lab per week. PREQ: Physics 112 and Mathematics 152. (Spring of odd-numbered years)

PHY 250 Intermediate Topics in Physics

A study of selected topics for beginning students based on faculty and student interests. Offered on an occasional basis. Course may be repeated when topic varies. 1 course credit.

PHY 260 Intermediate Directed Study

Student investigation of topic of interest working in collaboration with a faculty member resulting in significant oral and written work. See On-Campus Learning Opportunities for more information. PREQ: Freshman January term or Sophomore standing. Special permission required. Offered in variable course credit from 0.25-1.00.

PHY 261 Research Experience

This course offers students the opportunity to work in small research groups on independent research projects. Students work closely with a faculty member in the Physics Department on topic selection, theoretical and experimental design, data analysis, and presentation of results. Topics vary on student background and faculty expertise. PREQ: Physics 112 and Mathematics 152. Requirements met: Half Writing Competency. 0.50 course credit unit. (Usually each fall and spring)

PHY 281 Statics and Engineering Design

This course investigates the branch of mechanics concerned with bodies at rest and forces in equilibrium, with emphasis on engineering applications. Team projects introduce tools and techniques of engineering design, creative problem-solving, and collaborative learning. Topics include force systems, rigid bodies in equilibrium, structural analysis of trusses and frames, distributed forces, and friction. Integrated lecture and lab. PREQ: Physics 112 and Mathematics 152. (Fall of even-numbered years)

PHY 294 Intermediate Student Research

Intended for less experienced students to develop and execute a research project in physics beyond the constraints of the normal classroom, suitable for public dissemination on or off campus under mentorship of a faculty member. Typically, this work results in a formal presentation, written work, or creative works. Course credit varies from 0.00 – 1.00. PREQ: Instructor permission.

PHY 311 Classical Mechanics

This course examines an advanced study of Newtonian mechanics, oscillations, gravitation, nonlinear dynamics and chaos, and Lagrangian and Hamiltonian mechanics. PREQ: Physics 212 and Mathematics 301. (Each fall)

PHY 312 Electromagnetism

This course examines static electric and magnetic fields, electric and magnetic properties of matter, boundary value problems in electrostatics. Maxwell's equations, electromagnetic waves. PREQ: Physics 212 and Mathematics 301. (Each spring)

PHY 350/450 Advanced Topics in Physics

An investigation of selected topics for more advanced students based on faculty and student interests. Offered on an occasional basis. Course may be repeated when topic varies. Prerequisites vary. 1 course credit.

PHY 351 Advanced Laboratory

This course focuses on advanced methods and techniques used in several areas of physics.

Experiments may include optics, lasers, superconductivity, solid-state physics, and computer acquisition and analysis of experimental data. Includes one three-hour lab per week. (Fall of odd-numbered years)

PHY 361 Advanced Research Experience

This advanced course offers students the opportunity to work in small research groups on independent research projects. Students work closely with a faculty member in the Physics Department on topic selection, theoretical and experimental design, data analysis, and presentation of results. Topics vary on student background and faculty expertise. PREQ: Physics 261, Physics 212, and Mathematics 301. Requirements met: Half Writing Competency. 0.50 course credit unit. (Usually each fall and spring)

PHY 394 Advanced Student Research

Intended for advanced students to develop and execute a research project in physics suitable for public dissemination under mentorship of a faculty member. Students are expected to present the results of their research in a public forum. Typically, this work results in a formal presentation, written work, or creative works. Offered for variable course credit from 0.00 – 1.00. PREQ: Instructor permission.

PHY 431 Quantum Mechanics

A comprehensive course that includes Schrodinger's equation in three dimensions (free particle, harmonic oscillator, central force), correspondence limit, wave packets, spin, interaction of electromagnetic waves with atoms. PREQ: Physics 311 and Mathematics 301. (Usually each spring)

PHY 451 Observational Astronomy

This course introduces observational techniques in an astrophysical context. Students will engage in geometry, optics, materials, quantum physics, and astronomical software in order to gain a scientific understanding of the night sky, telescope use, and data reduction. Additionally, students will apply physics in the study of astronomical phenomena. Integrated lab and lecture course. PREQ: Physics 212 and Mathematic 301. (Fall of even-numbered years)

PHY 460 Advanced Directed Study

Student investigation of topic of interest related to the major or minor working in collaboration with a faculty member resulting in significant oral and written work. See On-Campus Learning Opportunities for more information. PREQ: Junior or Senior standing. Special permission required. Offered for variable course credit from 0.25-1.00.

PHY 464 Teaching/Learning Participation

An individualized study that includes sharing in the instructional process for a particular physics course under the supervision of the faculty member teaching the course. Open only to certain highly qualified juniors and seniors by invitation. See On-Campus Learning Opportunities for more information.

PHY 490 Independent Study

Student-driven independent work to produce a high quality body of work such as paper, report,

art project, etc. See On-Campus Learning Opportunities for more information. PREQ: Junior or Senior standing. Special permission required. Offered in variable course credit from 0.25-1.00.

PHY 491 Honors Thesis in Physics

Extensive independent study in the major in a topic of special interest culminating in a bachelor's thesis with oral examination by thesis committee resulting in a bachelor's degree with Honors upon completion. See Departmental Honors Program for more information. Completed in last three semesters before graduation. Offered for variable course credit from 1.00-2.00.

PHY 492 Independent Study Off-Campus/NSOC

Student-driven independent study in a topic related to the major completed at an off-campus site. See Off-Campus Learning Opportunities for more information. PREQ: Junior or Senior standing. Special permission required. Offered in variable course credit from 0.25-1.00.
